## Subject Index

- A-attachment, 109  
Achievement, 79–81  
Accomplishment, 79–81  
Activity  
  as event, 79–81, 179, 369  
  in brain, 380  
  in units, 3, 123, 134, 136–138  
Acquisition, 2, 8, 20, 43, 123, 127–128, 130, 174, 176, 193, 361–377, 379, 397, 399, 402. *See also* Grain problem; Learning; Theme-and-variation principle  
Action type, 77–81, 179  
Active node stack, 88, 90, 91  
Active trace strategy, 109  
Adjuncts. *See* Sentence structures, adjunct  
Adversative conjunctions, 338, 346, 348, 349, 355.  
  *See also* Connectives; Discourse  
Agent-requiring verbs, 266–268  
Ambiguity. *See also* Garden-path sentences  
  and animacy, 255–258  
  and competitive attachment, 143  
  and conceptual fit, 258–271  
  and dynamic systems, 140  
  and ergativity, 271–272  
  and syntactic (lexical) category, 254–255  
  and NVN template, 249–251  
  and plausibility, 258–271, 291–296, 308–309  
  and prosody, 309–312  
  and reanalysis, 117  
  and referential context, 273–283  
  and subcategorization, 154, 195, 251–253, 266–271, 274–285, 313–316  
  and temporal context, 283–285  
  conjoined noun phrase/coordinate clause (CNP/CC), 312–313  
  direct object/indirect object (DO/IO), 312–313  
  direct object/sentential complement (DO/SC), 293–300  
  direct object/subject (DO/S), 305–312  
  DO/SC vs. MC/RC, 298–300  
  lexical vs. syntactic, 129  
  lexical, 46–47  
  main clause/reduced relative (MC/RC), 7, 248–285, 293–300  
  nonstructural resolution of, 149 (*see also* Ambiguity, and plausibility; Ambiguity, and animacy; Ambiguity, and conceptual fit; Ambiguity, and referential context; Ambiguity, and temporal context)  
  reference, 64  
  sentential complement/relative clause (SC/RC), 300–305  
Ambiguity effect, 253, 254, 256, 257, 259, 261–266, 268–270, 281, 285, 295, 296. *See also* Garden-path effect.  
Analysis-by-synthesis. *See also* Late Assignment of Syntax Theory (LAST)  
  and aphasia, 397  
  and cognitive science, 403  
  and context, 332  
  and grain problem, 173–175, 405  
  and grammar, 172–173, 176–177, 187, 389  
  and habits vs. rules, 400, 405  
  and LAST, 6–9, 162–167, 175–176  
  and main clause/relative clause ambiguity, 247  
  and minimalist program, 178–179  
  and sentence templates, 316  
  and speech perception, 160–161  
  and two surface representations, 185, 324  
  and word recognition, 162  
  cyclic nature of, 252–253, 262–263, 273, 290, 308, 317, 330, 354  
  modularity of, 320, 323  
Anaphor, 51, 63, 64  
Animacy, 8, 122, 129, 149, 237, 240, 255–260, 286, 293. *See also* Plausibility; Features, semantic  
Aphasia, 378, 387, 388, 394, 402  
  agrammatic aphasia, 402  
  Broca's aphasia, 387, 394  
Architectural modularity, 322, 323  
Arguments, 48, 52, 246. *See also* Thematic roles  
  and aphasia, 388–392, 396

- Arguments (cont.)  
 and category problem, 122  
 and complex subcategorization, 312–316  
 and conceptual fit, 258–271  
 and conjunctions, 335–340, 352–353  
 and context, 274–285, 326–330  
 and distributional analysis, 365, 370  
 and ergativity, 271–273  
 and full relative clauses, 286–293  
 and function words, 189  
 and grain problem, 173–174  
 and movement, 181–183, 218–224, 228  
 and sentence templates, 175–176, 193–195, 247, 401  
 clausal, 343  
 in an integrated model, 150–152  
 in constraint-based models, 130  
 in Crocker's model, 107–111  
 in Frazier's model, 96–97  
 in Gibson's model, 111–114  
 in Gorrell's model, 101–103  
 in Jurafsky's model, 145  
 in LAST, 163–172, 273, 291, 401  
 in MacWhinney's model, 126–127  
 in Pritchett's model, 103–107, 294  
 in prospective search, 231–235  
 in pseudosyntax vs. real syntax, 211–218, 291  
 projection of, 312, 319–320  
 role in movement and derivation, 52–60  
 role in synthesis, 226  
 syntactic vs. semantic aspects of, 206–209  
 treatment in alternative linguistic theories, 62–81  
 treatment in alternative structural models, 114–120, 149–150
- Aspects model. *See* Linguistic theory, aspects model
- Associationism, 3, 14, 16, 18, 20, 41, 42, 124, 173.  
*See also* Stimulus-Response (S-R) theory
- Back-propagation, 123. *See also* Normalized recurrence algorithm
- Backtracking, 87, 107, 347
- Basic meaning, 62, 63, 66, 67, 385
- Basin of attraction, 141
- Behaviorism, 2, 3, 11, 13, 14, 16, 17, 18, 19, 20, 21, 23, 24, 25, 28, 34, 37, 39, 42, 43, 68, 69, 123, 124, 399, 403
- Binding, 71, 99, 101, 103, 109, 145
- Bottom-up processing, 23, 158, 164, 165. *See also* Modularity; Top-down processing
- Buffer, 88, 89, 90, 91, 92, 116, 117, 119, 346, 347, 360
- Canonical sentence. *See* NVN template
- Case, 49, 53, 62, 72, 99, 168, 171, 172, 195
- Case theory, 72, 99
- Cause-effect template, 346, 353, 355. *See also* Discourse
- Central processor, 321
- Clause order, 346, 354, 356
- Cleft sentences. *See also* Sentence structures  
 object, 194, 371, 388, 390, 395, 396  
 subject, 194, 371, 395, 396
- Category problem, 122
- Click-location task. *See* Task, click-location
- Clustering analysis, 33, 120
- CNP/CC. *See* Ambiguity, conjoined noun phrase/  
 coordinate clause (CNP/CC)
- Coding hypothesis, 34, 36, 39
- Cognitive science, 1, 2, 9, 37, 42, 321, 323, 399, 403, 404, 406
- Comparison of theories and models  
 linguistic, 62–82, 157–160  
 statistical, 146–148  
 structural, 114–120, 148–150
- Competence vs. performance, 26–29, 42, 129, 154, 321–323, 399, 403–406
- Competition model, 126, 127, 128
- Competitive attachment model, 143
- Complement clauses. *See* Sentence structure, complement clauses
- Complementizer, 140, 141, 295–297, 304
- Connectionism, 1, 42, 123, 124, 129, 132, 133, 404
- Conceptual fit, 8, 258–271, 272  
 and NVN template, 258–264  
 and subcategorization, 264–271
- Conjoined noun phrase/coordinate clause ambiguity (CNP/CC), 312–313
- Conjunctions, 352, 338, 346, 348, 354
- Connective, 335, 339, 343–346, 349–360. *See also* Adversative conjunctions; Cause-effect template; Conjunctions
- Consciousness, 403, 406, 407. *See also* Introspection; Multiple drafts model
- Constraint satisfaction (constraint-based models), 4, 129–139, 246, 334, 360, 388
- Construal principle, 94, 97. *See also* Minimal attachment
- Content words, 14, 73, 74, 158, 188–190, 217
- Covering grammar, 89
- Cross-modal lexical decision task. *See* Task, cross-modal lexical decision
- Cross-modal naming task. *See* Task, cross-modal naming
- Cue validity, 126, 127, 146, 187
- Current active node, 88
- Dative sentences, 224, 225, 233, 235, 313. *See also* Arguments, and complex subcategorization  
 alternating, 224–226, 313  
 nonalternating, 224–226, 234
- Deep structure, 25, 26, 28, 31, 32, 34–39, 67–72, 77, 78, 81
- Deep structure attachment, 109, 120
- Defective speech, 159

- Delimitation, 80. *See also* Events; Measuring out; Verbs, telic
- Derivation, 6, 40, 400  
 and competition model, 128  
 and ERPs, 378  
 and grain problem, 174–175  
 and LAST, 160–173, 314, 335, 380  
 and movement, 52–62  
 and probabilistic information, 157–160  
 and recursion, 52–62, 343  
 and synthesis, 178, 185, 323–324  
 and surface form, 347  
 independence of, 320  
 in minimalist program, 173–78, 78–179, 401  
 in real syntax, 9, 209, 218, 220, 323, 401, 405–407  
 linguistic architectures for, 65–82  
 Derivational theory of complexity (derivational hypothesis), 27, 30, 81, 179
- Deterministic model (determinism), 87, 89, 92, 93, 107, 116, 117, 119
- Deterministic parsing, 87–93, 107, 116–119
- Dialectical mush problem, 122. *See also* Modularity
- Direct object/indirect object ambiguity (DO/IO), 312–313
- Direct object/sentential complement ambiguity (DO/SC), 293–300
- Direct object/subject ambiguity (DO/S), 305–312
- Discourse, 8, 21, 54, 112, 130, 136, 223, 224, 247, 248, 277, 317, 321, 333, 353, 356, 375, 399, 402.  
*See also* Adversative conjunctions; Cause-effect template; Connective; Script  
 and connectives, 357  
 discourse context, 133, 139–140, 196–198, 273–274, 279–285, 300–304, 326–334, 359  
 discourse level pattern, 375  
 discourse processing system, 335, 346, 359, 376  
 discourse representation, 273, 320, 335, 360  
 effect on sentence comprehension, 87, 134–138, 324, 332, 376  
 effect on syntax checking, 352  
 narrative, 343  
 pragmatic meaning, 107, 109–111, 114, 118, 203–206, 340–343, 347, 348, 358, 359  
 discourses vs. sentences, 323, 332, 343  
 representation of, 285, 330, 332, 335
- Distributional analysis  
 and acquisition, 120–123, 361–370  
 and lexical vs. syntactic passive, 170–369
- DO/IO, 312–313
- Dominance, 99, 102, 103, 116, 118, 119, 150, 276, 379. *See also* Precedence
- DO/S, 305–312
- DO/SC, 293–300
- Dynamic system, 140, 142. *See also* Visitation set  
 gravitation
- Early closure, 203, 306, 307, 308, 309, 310, 311.  
*See also* Ambiguity, direct object/subject; Late closure
- Early left anterior negativity (ELAN), 382–387, 393–394
- Event-related potential (ERP), 293, 379, 380, 381, 382, 383, 385, 386, 397
- Events and action types, 76–80. *See also* Accomplishments; Achievements; States; Verbs, telic
- Exohead, 127. *See also* Competition model
- Eye movements. *See* Tasks, eye-tracking
- Features  
 and competitive attachment, 143  
 and generative semantics, 68  
 and GPSG, 55, 56, 58  
 and minimalist program, 73, 74, 75, 76, 77, 78, 81, 82  
 and structure probability, 145  
 checking of, 74, 78, 179  
 conceptual, 76–78, 272, 367, 369, 370  
 formal, 73–75  
 interpretable, 74–76  
 relation between conceptual and syntactic, 367  
 semantic, 76, 77, 80, 110, 130, 272  
 structural features, 12, 73, 121, 377  
 structural features and grain problem, 121  
 syntactic, 48, 320  
 universal, 406
- Filled-gap effect, 232, 233. *See also* Trace, *wh*-
- Functional completeness, 36, 337
- Function words  
 and aphasia, 388–391  
 and pseudosyntax, 124, 165–166, 175, 179–180, 188–189, 209, 217, 231, 245–249, 391, 401  
 context and, 189  
 in acquisition, 367, 372, 379  
 vs. content words, 14, 188, 189, 217
- Garden-path effect, 8, 92, 95, 112, 129, 146, 154, 251–255, 259, 262–264, 269–276, 312. *See also* Ambiguity effect
- Garden-path sentences. *See also* Ambiguity  
 conscious vs. unconscious, 103–107  
 dominant interpretation of, 247, 255, 257  
 interactions with animacy, 255, 259  
 interactions with conceptual fit, 259, 262, 263  
 interactions with homonymy, 251  
 interactions with plausibility, 114, 312  
 interactions with sentence templates, 251, 252, 254  
 interactions with subcategorization, 264, 272, 274, 276, 313  
 probability and, 146, 270
- Garden-path theory/model, 94–98, 138. *See also* Construal principle; Minimal attachment
- Generalized Phrase Structure Grammar (GPSG), 40, 55

- Generative semantics. *See* Linguistic theory, generative semantics
- Gestalt psychology, 19
- Government, 99. *See also* Linguistic theory, government and binding
- Government and binding theory. *See* Linguistic theory, government and binding
- GPSP. *See* Generalized Phrase Structure Grammar
- Grain problem, 15, 121, 126, 130, 142, 172–175, 323, 402–405
- Grammar. *See also* Linguistic theory  
 and acquisition, 2, 408  
 and analysis-by-synthesis, 151–152, 157–187, 206, 210–214, 220, 224, 236, 243, 250, 273, 312–314, 327–332, 335, 345, 401–402, 407  
 and aphasia, 387–397  
 and coding hypothesis, 34  
 and competition model, 126  
 and constraint-based models, 129, 148  
 and DTC, 28, 30, 32, 35, 37  
 and ERPs, 379–387  
 and meaning, 81, 82  
 and minimalist program, 47, 167, 178–179  
 and minimal attachment, 118  
 and Parsifal, 89, 91  
 and priming, 327–335  
 and S-R theory, 3  
 competence vs. performance, 26–28  
 features, 76, 77  
 generative, 60, 62, 65, 69  
 lexical-functional, 40  
 HPSG, 40, 55  
 structural vs. constraint-based models, 148  
 transformational, 22, 24, 25, 26, 27, 28, 39, 42, 399, 400
- Habits vs. rules, 1
- Head-driven Phrase Structure Grammar (HPSG), 40, 55, 58, 59. *See also* Missing NP
- Hemispheric asymmetries, 378–379
- Hidden unit (intermediate unit), 123, 132, 141, 142
- HPSG. *See* Head-Driven Phrase Structure Grammar
- Hybrid model, 5, 133, 142–146, 159, 388, 404, 405
- Incremental processing, 110
- Inductive learning (induction). *See also* Learning;  
 Theme-and-variation principle  
 analysis-by-synthesis, 6, 178, 377  
 connectionism, 3  
 defined, 2  
 grain problem, 173, 174, 405  
 perceptual strategies, 178  
 reinforcement, 3, 399, 400, 405  
 sentence-level, 2, 5, 8, 20, 362, 366, 377  
 statistical models, 120, 399, 400, 404
- Informational independence, 322. *See also*  
 Modularity
- Initial meaning-form hypothesis  
 and discourse context, 285, 286, 330  
 and prosody, 309, 310  
 and pseudosyntax, 203, 217, 249, 254, 272  
 and semantic features, 249, 260, 265, 272  
 and sentence templates, 249–252  
 and subcategorization, 251, 252, 273, 274, 280, 296, 314–316  
 as input to grammar, 210, 274, 305  
 vs. compositional meaning, 265, 324
- Input unit, 123, 132
- Interpretive semantics, 69
- Introspection, 226–246, 401, 402  
 prospective search, 158, 228, 229–236, 402  
 retrospective search, 158, 228, 229, 236, 242–245, 402
- Kernel sentence, 21. *See also* Coding hypothesis;  
 Derivational theory of complexity; Linguistic theory, syntactic structures model; Transformations
- Knowing how vs. knowing that, 37
- LAN. *See* Left anterior negativity
- Language acquisition, 361–377  
 distributional features, 363–370  
 sentence templates, 370–377
- Late Assignment of Syntax Theory (LAST). *See also* Analysis-by-synthesis; Initial meaning-form hypothesis; Pseudosyntax; Syntax checking  
 and acceptability violations, 228–245  
 and acquisition, 361–376, 402  
 and aphasia, 387–397, 402  
 and compositional meaning vs. initial meaning, 211, 401  
 and conceptual fit, 260, 262, 265, 268  
 and connectives, 343–360  
 and consciousness, 403  
 and discourse, 273–285, 330–335, 343–351
